

FEATURES

- Ultra Low Phase Noise: -157 dBc/Hz
- Multiple RF Outputs
- Automatic Reference Sensing
- DC Voltage Regulation
- Low Current Consumption
- Fully Customizable

These low-phase noise Multiplied PLOs provide the flexibility in the desired output frequency by utilizing a series of x2 multipliers. With an output range of 80 to 1600 MHz, these passive multiplier designs can be configured for most military airborne and ground based applications. With unparalleled phase noise performance of -157 dBc/Hz (at 100 kHz offset), the model BXMF1030 is capable of utilizing either its internal or an external 10 MHz reference. These Multiplied PLOs incorporate unique features including: DC Voltage Regulation, Automatic Reference Sensing, Low Current Consumption and Multiple RF Outputs.
