

### Rad-Hard Temperature Stable Negative Voltage Regulators/References

Adjustable and Fixed Temperature Stable Regulators and References Manufactured in a Certified Class-K Facility

#### Features

- Rad-Hard to 300 krad TID (note 1)
- Single Event Latch-up (SEL) immune (LET>87 MeV/mg/cm<sup>2</sup>)
- Wide Input/Output Voltage Differential: 40V
- K-level screening
- Excellent Temperature Stability

The APNREG Series are space qualified, wide-input range negative linear voltage regulators designed for military and space flight applications. Packaged in a hermetic TO-257 package, the regulators provide up to 1.5A of output current over their full input voltage range as per specification (see table 1). The device also features internal thermal shutdown and output current-limiting circuitry. This series is an excellent choice for applications requiring high radiation tolerance, low noise and high power supply rejection ratios.

These voltage regulators are provided in both adjustable and fixed output voltage configurations. The adjustable version requires only one external resistor to program the output.

#### Absolute Maximum Ratings

(Exceeding maximum ratings may damage the device.)

Symbol	Parameter	Value	Unit
Vin- Vo	DC input- Output Differential	40	V
Io	Output Current	1.5	A
Pd	Power Dissipation Tcase=25°C	50	W
Rthjc	Thermal Resistance, Junction to Case	3	°C/W
Tstg	Storage Temperature	-65 to +150	°C
Top	Operating Temperature Range	-55 to +125	°C
Tj	Maximum Junction Temperature	175	°C
W	Package weight	5	G
Tsold	Maximum Soldering Temperature, 10sec	265	°C

#### Radiation Ratings

Symbol	Parameter	Value	Unit
TID	Minimum in Spec Total Dose Performance (Dose Rate: 50-300 rad(Si)/s)	> 300	krads (Si)
ELDRS	Minimum in Spec Low Dose Rate Performance (Dose Rate ≤ 10 mRad (Si)/s)	> 50	krads (Si)
SET	Linear Energy Threshold, Single Event Transients < 100mV, (note 5)	> 15	MeV/mg/cm <sup>2</sup>
SEL/SEB	Single-Event Latch-up Free linear Energy Transfer Threshold	> 87	MeV/mg/cm <sup>2</sup>

### Post-Radiation (Ta= 25 °C) Notes <sup>(1) (3)</sup>

Symbol	Parameter	Test Conditions	Min	Typical	Max	Units
V <sub>REF</sub>	Reference Voltage Change	V <sub>diff</sub> = 40V, I <sub>L</sub> = 10mA			+/- 50	mV
I <sub>ADJ</sub>	Adjust-Pin Current Change	V <sub>diff</sub> = 3-35V, I <sub>Load</sub> = 10mA			+/- 5	μA

#### Notes:

- At the time of publication of this datasheet, API Technologies/Marlborough did not have a DLA certified radiation hardness assurance program.
- Load & Line regulation are measured at constant (T<sub>j</sub>) junction temperature using a low duty cycle pulse. Changes in output voltage due to heating effects must be evaluated separately.
- TID radiation testing is performed per MIL-STD-883, method 1019.
- Internal SOA protection limits output current with high input voltage.
- Minimum exposure where parameters are guaranteed to stay within spec.
- V<sub>in</sub> ≤ -9V and C<sub>OUT</sub> ≥ 44 uF
- V<sub>DIFF</sub> ≥ 39V @ 125°C
- At 125°C, a 1.5A output requires an I/O differential of ≥ 6.75 V.
- Please see Table 1 for values and limits of the various versions.

### Notes:

1. Protection resistor is 10 Ohms and is internally connected between the Output pin and the Sense pin to prevent a high Output Voltage excursion should the external remote sense connection be severed.
2. For fixed output versions, output tolerance is adjustable to zero with one external resistor.
3. Both Output Accuracy and Temperature Drift are specified as ± 25 mV Max. However, the sum of the two will not exceed +/- 25 mV (Applies to the non-TC versions only).
